

huby

TRUSTED AI, INDEPENDENTLY EVALUATED.

Ethical Charter

At **huby**, our product is trust. This charter defines the objective standards and transparency protocols that govern our AI evaluation framework.

Non-Compromised Objectivity

Independence First

huby operates on a strict "Non-Pay-to-Rank" policy. No founder, investor, or builder can pay to alter their score, bypass an audit, or secure a featured position. Our revenue models are strictly decoupled from our auditing department.

Open Methodology

Transparent Standards

Trust requires transparency. Our 6-Dimension Evaluation Framework is public. While the specific proprietary datasets used to test for security are confidential, the logic, weighting, and scoring criteria are open to community review and scrutiny.

Privacy-First Standard

Data Sovereignty

We treat user data as an asset for improving audit quality, never for advertising or monetization. We evaluate AI tools not just on how well they perform, but on how aggressively they protect the user's data sovereignty.
